
DATA I/O

Customer Service Letter

Product: PPI Adapters

Part Number: 983-0601-001

Dear Customer,

Thank you for your purchase of a PPI adapter. PPI adapters are designed to provide unique Packaging or Pinout Interfaces that expand the programming capabilities of your programmer. PPI adapters are available for support of Quad Flat Packages (QFP's), Thin Small Outline Packages (TSOP's), Shrink Dual Inline Packages (SDIP's), Pin Grid Arrays (PGA's), PC Cards, and other package styles.

Included with this adapter are "configuration capacitors" that are used when there is a specific need for a particular device. For most devices they are not used. The software will instruct the operator, upon device selection, when configuration capacitors are needed.

If you did not receive a software diskette with your PPI adapter, the device(s) you desire to program is supported in the standard release of the software. To use the PPI simply install it in the PPI base and select the appropriate device you wish to program.

If you did receive a software diskette with your PPI adapter, the algorithm required to program your device(s) is not supported in the standard release of software. To use the PPI adapter:

1. Install it in the PPI base.
2. Install the enclosed diskette in the programmer floppy drive.
3. Select the Extended Algorithm option on your programmer.

Again, thank you for choosing Data I/O for your programming support.
